NASDAQ Daily Share Volume

NASDAQ OMX®

Increased Market Transparency for Better Routing Decisions

NASDAQ OMX® recently introduced the **NASDAQ Daily Share Volume**, a new way to track market participants' trading performance in specific stocks, indices and sectors. NASDAQ's Daily Share Volume Reports display NASDAQ-listed and non-NASDAQ listed share volume on NASDAQ late the same day of the trade, allowing you to make better educated routing and trading decisions.

Credible Data for More Informed Trading Decisions

The NASDAQ Daily Share Volume Reports provide accurate and credible data to aid in your trading strategies. The data from these reports is the "gold-source" of information, obtained from actual trades executed on NASDAQ and from all trade reports directly entered into the FINRA/NASDAQ Trade Reporting Facility™ (ACT technology).

Customizable Reports to Meet Customer Needs

The NASDAQ Daily Share Volume Reports will be available at market close each day and can be obtained through a query-response system. The Daily Share Volume Reports can be customized by exchange and can be sorted by volume or by symbol. In addition, reports can be organized by:

- Market participant
- Issue
- Index
- Sector
- Composite (NASDAQ-listed or non-NASDAQ listed)

The reports are also available as a web-based data product via HTML or through secure file transfer protocol (FTP), which allows firms to download the data to perform their own customized analysis.

To sample NASDAQ's Daily Share Volume Reports, please visit the NASDAQ OMX DataStore at **data.nasdaqomx.com***.
