

# NASDAQ OMX QVIEW LATENCY OPTICS

## A CLEAR VIEW INTO YOUR TRADING PERFORMANCE

NASDAQ OMX Latency Optics offers order-level latency transparency via the NASDAQ OMX QView product. Powered by Corvil, the enhanced offering provides customers with an order-by-order view of their OUCH session message flow (currently NASDAQ only).

- ▶ Latency values by session and order for: Order to Ack | Order to Book | Cancel to out
- ▶ OUCH Server Queue Depth and Matching Engine Timestamps.
- ▶ On-demand PCAPs

Customers can expand each session to get a detailed view of the current trading day in each category.

## FEATURES

- ▶ Aggregated session and detailed order latency in multiple measurement categories
- ▶ Detailed analysis for the current trading day that can be scrutinized down to a one-second granularity
- ▶ Ability to export data
- ▶ Interactive graphs that can be manipulated for custom viewing
- ▶ On-demand historical packet capture files (PCAPs) going back up to several weeks
- ▶ Percentile charts for each category of measurement for a holistic view of the day's trading
- ▶ Comparative latency data across peers based on connectivity method
- ▶ Queue-Depth at the OUCH port that provides metrics on the efficiencies of your port utilization
