Nasdaq Basic Canada

Product Overview
Nasdaq Basic Canada is the dynamic alternative level 1 data feed for real time Canadian Equities Information across TSX, TSX-V, and CSE listed securities. With Basic Canada, investors access a proprietary data product that provides accuracy, liquidity, instrument coverage and accessibility with significant cost-savings.

Nasdaq Basic Canada is the combination of data from all three of Nasdaq’s Canadian trading books. It consists of level 1 data from Nasdaq CXC, Nasdaq CX2, and Nasdaq CXD, offering best bid and offer and last sale information on one consolidated feed.

Publisher
Nasdaq Global Information Services equips investors with the tools to make informed decisions by providing innovative real-time and historical analytic products and intelligent solutions designed to tap new data sets and meet new industry challenges. Nasdaq Data Link eliminates infrastructure and resource obstacles from collecting and storing large data sets, providing tools with industry adopted open standards to ingest and analyze market data and other financial information. To learn more about the company, technology solutions and career opportunities, visit us on LinkedIn, on Twitter @Nasdaq, or at www.nasdaq.com.

Delivery
Nasdaq Data Link provides a modern and efficient method of delivery for real-time exchange data and other financial information. Data is made available through a suite of APIs, allowing for effortless integration of data from disparate sources, and a dramatic reduction in time to market for customer-designed applications. The API is highly scalable, and robust enough to support the delivery of real-time exchange data.

This repository provides an SDK for developing applications to access the Nasdaq Data Link API. While the SDK is open source, connecting to the API does require credentials, which are provided by Nasdaq during an on-boarding process.

For more information please use the link- https://github.com/Nasdaq/CloudDataService

Data Types
Numeric longs are used to represent floating point numbers. Nasdaq will identify the decimal point precision for the field with a notation of En, where n indicates the number of decimal places in the number. For example, the
Dates are integer fields. When converted, dates are reported in YYYYMMDD format.

**Quotation Message**

The following message is used to relay Nasdaq Basic Canada Quotation Report. The Nasdaq Canada BBO will broadcast a real-time update every time the Nasdaq Canada best bid and offer quote is updated throughout the trading day. The Nasdaq Basic Canada Quotation message denotes size as a combined value, with attribution in size to the underlying venue where the order(s) originated from.

Trade Break Message

If a Trade is cancelled during the same day as its execution, Nasdaq Basic Canada will send a Trade Break message. This message will reference the original Trade Message’s Trade Control Number, so a consumer of this content is responsible for managing the daily Time and Sales content to ensure data can be managed locally to affect any change in market data represented by the Trade Break.

Stock Status Message

This message indicates the current trading status of a stock. At the start of day, the feed will send a stock status message for each of the symbols trading on Nasdaq Canada. Subsequently, stock status messages will be sent when a stock is halted or is released for trading. If a security halts on one trading book, but remains in a trading state on another trading book, the user will continue to receive orders on Nasdaq Basic Canada, but all orders will be from the trading book actively trading the instrument at that point in time. If the Stock Status message is sent with a Market of ‘A’, and a System Status of “H”, this means that trading is halted across all trading books.

Note: Normal case is to halt and resume symbols across all books using a Market Value of “A”

Last Sale Condition Matrix

Within the market data industry, the term “Last Sale” is typically used to denote the most recent round or mixed lot trade transaction reported by a market center with an eligible sale condition code for the regular Canadian Market session. For Nasdaq Canada, firms should use the time stamp field from the Trade Report message to determine the proper trade sequence order for last sale calculations as well as time and sales displays.

To facilitate a “Last Sale” calculation, Nasdaq Canada includes the Sale Condition modifier. The Sale Condition Modifier field consists of four levels. A trade should only be applied to the high, low, last sale, and volume calculations if all four sales condition modifiers so allow.

Sale Condition – Level 1 denotes the trade attribute type of the transaction.

<table>
<thead>
<tr>
<th>Code</th>
<th>Value</th>
<th>High/Low</th>
