Subject: Proposed Rule Change Notice – CBOE Margin Rules

Pursuant to ISE Rule 1202(a), which states that Members must elect to be bound by the initial and maintenance margin requirements of either the CBOE or the NYSE as the same may be in effect from time to time, this Regulatory Information Circular informs Members of a proposed rule change to CBOE’s margin rules published by the SEC, attached.

In the June 7, 2012 Federal Register, the SEC published a notice of filing of a proposed rule change by CBOE (SR-CBOE-2012-043) that proposes a single, universal definition of a spread and one spread margin requirement that consists of a universal margin requirement computation methodology (Exchange Act Release No. 34-67086 (May 31, 2012)).

Please contact me with any questions.
SECURITIES AND EXCHANGE
COMMISSION

[Release No. 34-67086; File No. SR-CBOE-
2012-043]

Self-Regulatory Organizations;
Chicago Board Options Exchange,
Incorporated; Notice of Filing of a
Proposed Rule Change Relating to
Spread Margin Rules

Pursuant to Section 19(b)(1) of the
Securities Exchange Act of 1934
(“Act”), and Rule 19b-4 thereunder, notice is hereby given that on May 29,
2012, the Chicago Board Options Exchange, Incorporated (“Exchange” or
“The Exchange”) filed with the Securities and
Exchange Commission (“Commission”) the proposed rule change as described
in Items I, II and III below, which Items have been prepared by the Exchange.
The Commission is publishing this notice to solicit comments on the
proposed rule change from interested persons.

I. Self-Regulatory Organization’s
Statement of the Terms of Substance of
the Proposed Rule Change

This filing proposes universal spread
margin rules. The text of the proposed
rule change is available on the
Exchange’s Web site (http://
www.cboe.com/AboutCBOE/
CBOELegalRegulatoryHome.aspx), at the Exchange’s Office of the Secretary,
and at the Commission’s Public
Reference Room.

II. Self-Regulatory Organization’s
Statement of the Purpose of, and
Statutory Basis for, the Proposed Rule
Change

In its filing with the Commission, the
Exchange included statements
concerning the purpose of and basis for
the proposed rule change and discussed
any comments it received on the
proposed rule change. The text of these
statements may be examined at the
places specified in Item IV below. The
Exchange has prepared summaries, set
forth in sections A, B, and C below, of
the most significant aspects of such
statements.

A. Self-Regulatory Organization’s
Statement of the Purpose of, and the
Statutory Basis for, the Proposed Rule
Change

1. Purpose

An option spread is typically
characterized by the simultaneous
holding of a long and short option of
the same type (put or call) where both
options overly the same security or
instrument, but have different exercise
prices and/or expiration dates. To be eligible
for spread margin treatment, the long
option may not expire before the short
option. These long put/short put or long
call/short call spreads are known as
two-legged spreads.

Since the inception of the Exchange, the
margin requirements for two-legged
spreads have been specified in CBOE
margin rules. The margin requirement
for a two-legged spread that is eligible
for spread margin treatment is its
maximum risk based on the intrinsic
values of the options, exclusive of any
net option premium paid or received
when the positions were established.
For example, consider the following option
spread:

Long 1 XYZ May2011 60 call
Short 1 XYZ May2011 50 call

The maximum potential loss (i.e., risk)
for this particular spread would be
a scenario where the price of the
underlying stock (XYZ) is $60 or
higher. If the market price of XYZ is $50, the
May2011 60 call would have an
intrinsic value of zero, because the
right to buy at $60 when XYZ can be
purchased in the market for $60 has no
intrinsic value. The May2011 50 call
would have an intrinsic value of $10
because of the $10 advantage gained by
being able to buy at $50 when it costs
$60 to purchase XYZ in the market.
Because each option contract controls
100 shares of the underlying stock, the
intrinsic value, which was calculated on
a per share basis, is multiplied by 100,
resulting in an aggregate intrinsic value
of $1,000 for the May2011 50 call.
However, because the May2011 50 call
is short, the $1,000 intrinsic value is a
loss, because it represents the cost to
close (i.e., buy back) the short option.
At an assumed XYZ market price of $60,
netting the intrinsic values of the
options results in a loss of $1,000
(− $1,000). Therefore, the
maximum risk of, and margin
requirement for, this spread is $1,000.
If there is no maximum risk (i.e., there is
no loss calculated at any of the exercise
prices found in the spread), no margin
is required, but under Exchange margin
rules any net debit incurred to establish
the spread would be required to be paid
for in full. Current CBOE Rule
12.3(c)(5)(C)(4) provides that, when the
exercise price of the long call (or short
put) is less than or equal to the exercise
price of the offsetting short call (or long
put), no margin is required; and that
when the exercise price of the long call
(or short put) is greater than the exercise
price of the offsetting short call (or long
put) the amount of margin required is
the lesser of the margin requirement on
the short option, if treated as uncovered,
or the difference in the aggregate
exercise prices. The intrinsic value
calculation described above is
especially expressed, in different
words, in the current rule language.

The maximum risk remains constant
at $1,000 for XYZ market prices higher
than $60 because for each incremental
increase in the assumed market price of
XYZ above $60, the loss on the short
option is equally offset by a gain on the
long option in terms of their intrinsic
values. By calculating the net intrinsic
value of the options at each exercise
price found in the spread, as in the
computation exemplified above, the
maximum risk of, and margin
requirement for, any two-legged spread
can be determined.

On August 23, 1999, the Exchange
implemented specific definitions and
margin requirements for butterfly
spreads and box spreads. In a butterfly
spread, a two-legged spread is combined
with a second two-legged spread (same
type—put or call—and same underlying
security) as in the following example:

Long 1 XYZ May2011 50 call
Short 1 XYZ May2011 60 call
Long 1 XYZ May2011 70 call
Short 1 XYZ May2011 80 call

Note that a short XYZ May2011 60
call option is common to both two-
legged spreads. Therefore, by adding the
May2011 60 call options together, the
two spreads can be combined to form a
butterfly spread as follows:

Long 1 XYZ May2011 50 call
Short 2 XYZ May2011 60 calls
Long 1 XYZ May2011 70 call

The margin requirement for a
butterfly spread is its maximum risk.
The maximum risk can be determined

3 Chapter 12, Rule 12.3(c)(5)(C)(4).
4 Any net credit received for establishing a spread
may be applied to the margin requirement, if any. In
the case of a spread that is established for a net
debit, the net debit must be paid for in full.
5 The result would be multiplied by the number of
contracts when more than one case-by-case contract
spread is involved.
6 At an assumed market price of $50, both the
May2011 50 call and May2011 60 call would have
no intrinsic value. Thus, there is no risk (provided
any net debit is paid for in full) at an assumed
market price of $50.
in the same manner as demonstrated above for two-legged spreads. In this example, the net intrinsic values would be calculated at assumed prices for the underlying of $50, $60 and $70, which are the exercise prices found in the butterfly spread. The greatest loss, if any, from among the net intrinsic values is the margin requirement. For this particular butterfly spread, there is no loss in terms of net intrinsic values at any of the assumed underlying prices ($50, $60 or $70). Therefore, there is no margin requirement. However, the net debit incurred to establish this butterfly spread must be paid for in full.

In a box spread, a two-legged call spread is combined with a two-legged put spread. The exercise prices of the long and short put options are the reverse of the call spread. All options have the same underlying security and expiration date. An example is as follows:

Long 1 XYZ May2011 50 call
Short 1 XYZ May2011 60 call
Long 1 XYZ May2011 60 put
Short 1 XYZ May2011 50 put

The margin requirement for a box spread, unless all options are European style, is its maximum risk. The maximum risk of a box spread can be determined in the same manner as demonstrated above for two-legged spread and butterfly spreads. In this example, the net intrinsic values would be calculated at assumed prices for the underlying of $50 and $60, which are the exercise prices found in the box spread. The greatest loss, if any, from among the net intrinsic values is the margin requirement. For this particular box spread (long box spread), there is no loss in terms of net intrinsic values at any of the assumed underlying prices ($50 or $60). Therefore, there is no margin requirement. However, the net debit incurred to establish this box spread must be paid for in full. In the case of a long box spread where all options are European style, the margin requirement is 50% of the difference in the exercise prices (in aggregate).\[10\]

On August 13, 2003, the Exchange issued a Regulatory Circular (RG03-066) to define additional types of multi-leg option spreads, and to set margin requirements for these spreads through interpretation of Exchange margin rules. The Regulatory Circular had been filed with the Commission and was approved on August 8, 2003, on a one-year pilot basis.\[11\] The Regulatory Circular was reissued as RG04-90 (dated August 16, 2004) and RG05-37 (dated April 6, 2005) pursuant to one-year extensions of the pilot granted by the Commission on August 6, 2004, and March 22, 2005, respectively.\[12\]

The Regulatory Circular identified seven spread strategies by presenting an example of each spread’s configuration, and numbering each configuration, rather than designating the configurations by names commonly used in the industry. The seven configurations would be referred to in the industry as:

- Long Condor Spread
- Short Iron Butterfly Spread
- Short Iron Condor Spread
- Long Calendar Condor Spread
- Long Calendar Butterfly Spread
- Short Calendar Iron Butterfly Spread
- Short Calendar Iron Condor Spread

On July 30, 2004, the Exchange filed proposed rule amendments with the Commission to codify the provisions of the Regulatory Circular in Exchange margin rules. Included in the proposal were definitions of Long Condor Spread (which includes a Long Calendar Condor Spread), Short Iron Butterfly Spread (which includes a Short Calendar Iron Butterfly Spread), and Short Iron Condor Spread (which includes a Short Calendar Iron Condor Spread). In addition, it was proposed that the existing definition of Long Butterfly Spread be amended to include a Long Calendar Butterfly Spread. The margin requirements, specific to each type of spread, as had been set-forth in the Regulatory Circulars, were also proposed for inclusion in Exchange margin rules.\[13\] Compendiously, the New York Stock Exchange filed similar margin rule proposals with Commission.\[14\] CBOT’s proposed rule amendment was approved by the Commission on December 14, 2005.\[15\]

Because a number of variations are possible for each of the basic type of multi-leg option spread strategy, it is problematic to maintain margin rules specific to each.\[16\] It becomes difficult to continually designate each variation by name, and define and specify a margin requirement for it in the rules. For example, consider the following spreads:

- Long 10 XYZ May2011 50 call
- Short 10 XYZ May2011 60 call
- Long 5 XYZ May2010 70 call
- Short 5 XYZ May2011 60 call

These two spreads combined are a variation of a condor spread. In a basic condor spread, the number of option contracts would be equal across all option series and the interval between the exercise prices of each spread would be equal. In the above variation, there is a 10-by-10 contract spread vs. a 5-by-5 contract spread, and a spread with a 5 point interval between exercise prices vs. a spread with a 10 point interval between exercise prices. The two spreads in the above example offset each other in terms of risk, and no margin requirement is necessary. However, margin of $5,000 is required under the Exchange’s current margin rules, because this variation of the condor spread is not specified in the rules. Because it is not recognized in Exchange margin rules, the two spreads must be treated as separate, unrelated spread strategies for margin purposes. As a result, spread margin of $5,000 is required (on the May2011 70/May2010 60 call spread) versus no requirement (other than pay for the net debit in full), if the two spreads could be recognized as one strategy.

This rule filing proposes a single, universal definition of a spread and one spread margin requirement that consists of a universal margin requirement computation methodology. In this manner, the margin requirement for all types of option spreads would be covered by a single rule, without regard to the number of option series involved or the term commonly used in the

\[\text{See Securities Exchange Act Release No. 52739 (Nov. 4, 2005), 70 FR 66173 (Nov. 14, 2005) (SR-CBOE-2004-53). This release also noticed a partial amendment (Amendment No. 1) that was filed on August 13, 2003, in coordination with the New York Stock Exchange.}\]

\[\text{A long calendar butterfly spread is an example of a variation. The basic type would be butterfly spread on a long calendar butterfly spread, one of the long options expires after the two options expire concurrently, whereas in the basic butterfly spread, all options expire concurrently. Another example of a variation of a butterfly spread would be a configuration where the intervals between the exercise prices involved are not equal. In a basic butterfly spread, the intervals are equal (i.e., symmetric).}\]
industry to refer to the spread. This would eliminate the need to define, and refer to, particular spreads by monikers commonly used in the industry.

Therefore, this rule filing proposes to eliminate definitions of each particular spread strategy (e.g., butterfly, condor, iron butterfly, iron condor, etc.), with one exception.

The one exception would be "Box Spreads." A definition for "Box Spread" would be retained because loan value is permitted under Exchange margin rules for box spreads. Box spreads are the only type of spread that is eligible for loan value. Thus, there need to be specially identified in the rules.

Additionally, the proposed rule changes would automatically enable variations not currently recognized in Exchange margin rules (because only a limited number of specific spread strategies are defined) to receive spread margin treatment.

A new definition of a spread is proposed as Rule 12.3(a)(5). The key to the definition is that it designates a spread as being an equivalent long and short position in different call option series and/or equivalent long and short positions in different put option series, or a combination thereof. With respect to equivalency of long and short positions, the definition further requires that the long and short positions be equal in terms of the aggregate value of the underlying security or instrument covered by each leg. The aggregate value equivalency is included so that it is clear that a spread composed of one standard option contract and one reduced value option contract covering the same underlying security or instrument would be permissible. For example, if reduced value options, equal to 1/10th the value of a standard option contract are trading, a spread consisting of 10 reduced value contracts vs. one standard contract would be permissible. As with spreads under the current rule, the proposed rule further requires that the short option(s) expire after, or at the same time as, the long option(s). Additionally, under the proposed rule definition, all options in a spread must have the same exercise style (American or European) and either be composed of all listed options or all over-the-counter (OTC) options. Spreads that do not conform to the definition would be ineligible for spread margin treatment.

Amendments to CBOE Rule 12.3(c)(5)(C)(4) are proposed to implement language specifying how a margin requirement is to be computed for any spread that meets the definition, and limit eligibility for spread margin treatment to spreads that meet the definition. The computational method would require that the intrinsic value of each option series contained in a spread be calculated for assumed prices of the underlying security or instrument. The exercise prices of the option series contained in the spread would be required to be used as the assumed prices of the underlying security or instrument. For each assumed price of the underlying, the intrinsic values would be netted. The greatest loss from among the netted intrinsic values would be the spread margin requirement. As an example, consider the following spread:

<table>
<thead>
<tr>
<th>Spread</th>
<th>$50</th>
<th>$60</th>
<th>$65</th>
<th>$70</th>
</tr>
</thead>
<tbody>
<tr>
<td>Long 1 XYZ May 2011 50 put</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Short 1 XYZ May 2011 60 put</td>
<td></td>
<td></td>
<td></td>
<td>(1,000)</td>
</tr>
<tr>
<td>Short 1 XYZ May 2011 65 call</td>
<td></td>
<td></td>
<td>(500)</td>
<td></td>
</tr>
<tr>
<td>Long 1 XYZ May 2011 70 call</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Net intrinsic values</td>
<td>(1,000)</td>
<td>0</td>
<td>0</td>
<td>0</td>
</tr>
</tbody>
</table>

The greatest loss from among the netted intrinsic values is $1,000. Under the proposed rule amendments, this would be the margin requirement. This spread margin requirement is $500 less than that required under current Exchange margin rules. Note that under both the current and proposed rules, any net debit incurred when establishing the spread is required to be paid for in full.

This spread is a variation of an iron condor spread. It consists of a put spread and a call spread, with all options covering the same underlying security or instrument. There are an equal number of contracts long and short in both the put spread and call spread. The short options expire with or after the long options (with, in this case). It is assumed that all options are of the same exercise style (American or European). This spread would, therefore, be eligible for the spread margin requirement computation in this proposed rule amendment.

Note that in this example, the interval between the exercise prices in the put spread is greater than the interval in the call spread. In a basic iron condor spread, these intervals are equal. This particular configuration is not recognized under current Exchange margin rules. Therefore the component put spread and call spread must be viewed as separate, unrelated strategies for margin purposes. Under current Exchange margin rules, there is a $1,000 margin requirement on the put spread and $500 margin requirement on the call spread. However, there are offsetting properties between the two spreads, and, if viewed collectively, a total margin requirement of $1,500 is not necessary. Using the proposed computational methodology, a margin requirement would be calculated as follows:

Establishing the spread is required to be paid for in full. It can be intuitively shown that the put spread and call spread in the example do not have $1,500 of risk when viewed collectively. If the price of the underlying is at or above $65, the put spread would have no intrinsic value. At or below $65, the call spread would have no intrinsic value. Thus, both spreads would never be at risk at any given price of the underlying. Therefore, margin need be required on only one of the spreads—the one with the highest risk. In this example, the put spread has the highest risk ($1,000), and that is the risk (and margin requirement)
that would be rendered by the proposed computational methodology.

In summary, the proposed rule amendments would enable the Exchange, for margin purposes, to accommodate the many types of spread strategies utilized in the industry today in a fair and efficient manner.

2. Statutory Basis

The Exchange believes that the proposed rule change is consistent with Section 6(b)\(^2\) of the Act and the rules and regulations under the Act, in general, and furthers the objectives of Section 6(b)(5).\(^2\) Because this rule filing proposes a single, universal definition of a spread and a spread margin requirement that consists of a universal margin requirement computation methodology, it promotes just and equitable principles of trade and fosters cooperation and coordination with persons engaged in facilitating transactions in securities. By adding clarity and consistency to margin requirements, it also removes impediments to and perfects the mechanisms of a free and open market and a national market system, and, in general, to protect investors and the public interest.

B. Self-Regulatory Organization’s Statement on Burden on Competition

CBOE does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act.

C. Self-Regulatory Organization’s Statement on Comments on the Proposed Rule Change Received from Members, Participants, or Others

The Exchange neither solicited nor received comments on the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Within 45 days of the date of publication of this notice in the Federal Register or within such longer period (i) as the Commission may designate up to 90 days of such date if it finds such longer period to be appropriate and publishes its reasons for so finding or (ii) as to which the self-regulatory organization consents, the Commission will:

(A) By order approve or disapprove such proposed rule change, or
(B) Institute proceedings to determine whether the proposed rule change should be disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments
- Use the Commission’s Internet comment form (http://www.sec.gov/rules/sro.shtml); or
- Send an email to rule.comments@sec.gov. Please include File Number SR-CBOE-2012-043 on the subject line.

Paper Comments
- Send paper comments in triplicate to Elizabeth M. Murphy, Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549-1090.

All submissions should refer to File Number SR-CBOE-2012-043. This file number should be included on the subject line if an email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission’s Internet Web site (http://www.sec.gov/rules/sro.shtml). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission’s Public Reference Room, 100 F Street NE., Washington, DC 20549 on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of such filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR-CBOE-2012-043 and should be submitted on or before June 8, 2012.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.\(^\)\(^2\)

Kevin M. O’Neill,
Deputy Secretary.

BILLING CODE 8011-01-P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

Notice of Passenger Facility Charge (PFC) Approvals and Disapprovals

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Monthly Notice of PFC Approvals and Disapprovals. In May 2012, there were three applications approved. This notice also includes information on one application, approved in April 2012, inadvertently left off the April 2012 notice. Additionally, four approved amendments to previously approved applications are listed.

SUMMARY: The FAA publishes a monthly notice, as appropriate, of PFC approvals and disapprovals under the provisions of the Aviation Safety and Capacity Expansion Act of 1990 (Title IX of the Omnibus Budget Reconciliation Act of 1990) (Pub. L. 101-508) and Part 156 of the Federal Aviation Regulations (14 CFR part 156). This notice is published pursuant to paragraph d of § 156.29.

PFC Applications Approved

PUBLIC AGENCY: Tri State Airport Authority, Huntington, West Virginia.

APPLICATION NUMBER: 12-07-C-00-HTS.

APPLICATION TYPE: Impose and use a PFC.

PFC LEVEL: $4.50.

TOTAL PFC REVENUE APPROVED IN THIS DECISION: $2,369,532.

EARLIEST CHARGE EFFECTIVE DATE: July 1, 2012.

ESTIMATED CHARGE EXPIRATION DATE: October 1, 2017.

CLASS OF AIR CARRIERS NOT REQUIRED TO COLLECT PFC’S: None.

Brief Description of Projects Approved for Collection and Use

\(^\) 17 CFR 200.30-3(a)(12).
